PROFESSIONAL SUMMARY

Engineering student in Minnesota State University, Mankato's Iron Range Engineering program with an electrical focus. Experience includes student project management, experimental planning, prototyping, and materials research. Seeking an engineering internship or co-op; available full-time, up to 40 hours per week.

EDUCATION

Minnesota State University, Mankato - Iron Range Engineering (IRE) Minnesota
Bachelor of Science in Engineering, Electrical Focus Aug 2026 - Present
Whatcom Community College Bellingham, WA
Associate of Science - Engineering Pathway Sep 2023 - Jun 2026

PROJECT EXPERIENCE

Ultrasonic Milling Industry Design Project - Student Project Manager Sep 2026 - Present
Student engineering project for North American Iron / Calumet Reclamation Company | Iron Range Engineering
- Lead a 5-person student team evaluating ultrasonic versus conventional ball milling for hematite ore; coordinate project scope, team responsibilities, client questions, and technical deliverables.
- Develop a technical test plan around solids concentration, flow rate, and exposure time to compare particle-size distributions using sieve analysis and mass measurements.
- Organize test data and engineering comparisons in Microsoft Excel to communicate energy use, process efficiency, and recirculation considerations in client discussions and reports.

Wooden Bridge Design Project
Whatcom Community College
- Used measuring and basic woodworking tools to fabricate and assemble a bridge prototype, checking alignment and fit throughout construction.
- Iterated on design and assembly decisions to improve structural stability, accuracy and build quality.

Wooden Pen Holder & Phone/Tablet Stand
Whatcom Community College
- Applied measuring and woodworking tools to build a multifunctional organizer that stores writing tools and supports a phone or tablet.
- Balanced dimensions, support geometry, stability, and usability while translating a practical need into a finished physical prototype.

Grapefruit Peel Paper Production | Science and Technology Project
- Researched grapefruit peel composition, papermaking methods, and paper quality criteria to investigate discarded peel as a papermaking material.
- Collaborated with project teammates to produce handmade paper from grapefruit pith through initial drying, chemical treatment, pulping, PVA binder mixing, sheet forming, and final drying.
- Evaluated writing performance and water absorption, and made paper bags and small boxes with teammates to assess folding performance and shape retention.

TECHNICAL SKILLS

Engineering & Analysis: Experimental planning, sieve analysis, measurement, prototyping, basic fabrication, engineering problem solving
Software & Tools: Microsoft Excel, Microsoft Words, Microsoft Powerpoint, Microsoft Project Professional, AutoCAD (currently learning), Arduino IDE (currently learning), measuring tools, basic woodworking tools
Languages: Vietnamese (Native), English (Working proficiency)

LEADERSHIP & CAMPUS EXPERIENCE

Whatcom Community College Bellingham, WA
Student Senator
- Represented student interests, gathered input on student needs, and contributed to campus discussions and collaborative decision making.

Engagement Team Member | Student Organization
- Collaborated with student organization members to plan weekly events, including food, activities, and venues; organized Arcade Days.
